

# YASNAC MRC

CONTROLLER FOR INDUSTRIAL ROBOT MOTOMAN

BASIC OPERATOR'S MANUAL

Before initial operation, read these instructions thoroughly, and retain for future reference.

YASKAWA

Turn this page for figures of the YASNAC MRC operator's panel and the programming pendant.

This manual illustrates graphically the basic operation procedures for MOTOMAN robots.  
Refer to the standard Operator's Manual and Maintenance Manual, respectively, for details.

# GUIDE OF THE MANUAL

---

## ■ KEYS

- Keys are enclosed in boxes.

[Example]  key is represented as follows.

Depress  .

- Softkey labels displayed on the screen are enclosed in brackets.

[Example]   key is represented as follows.

Depress  [T-LOCK] .

- Keys joined by “+” means to hold down the first key, and depress second key.

[Example] Instruction to hold down  and depress  is written as follows:

Depress  +  .

- Each numerical key is assigned to a function apart from entry of the number. In this manual, a numerical key is represented by either the numeral or the word on the key top that corresponds to the objective function in the context.

[Example]  key is represented as follows.

Instruction to enter the number “1” is written as follows:

Depress  .

Instruction to enter a timer instruction is written as follows:

Depress  .

## ■ SCREENS

- The whole or part of the programming pendant screen is shown as follows, as required.

Entire screen

Upper part of the screen

Middle part of the screen

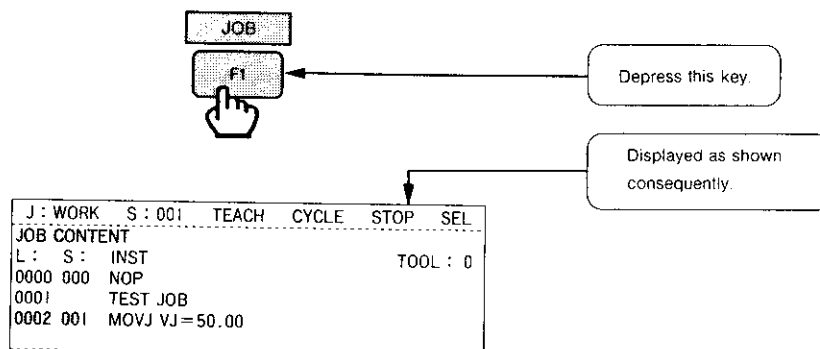

Lower part of the screen

- In the description of the operation procedures, the keys and screens are in the operating order in principle.

[Example]

**1** Depress **F1** **[JOB]** .

# CONTROLLER

---

The main power switch and the door lock are provided on the front of the YASNAC MRC controller. The playback box is mounted on the upper right part of the front face. The programming pendant is hooked on the side.

## MAIN POWER SWITCH:

Turns ON and OFF control power to the YASNAC MRC.

## DOOR LOCK:

Locks the front door.

## PLAYBACK BOX:

Supports keys that are mainly used when playing back a job with the manipulator.

## PROGRAMMING PENDANT:

Supports keys that are mainly used when teaching the manipulator.

# KEY FUNCTION

## ■PLAYBACK BOX

E STOP

Turns OFF the servo power.

ALARM ERROR

This lamp lights if an alarm or error occurs.

SERVO POWER

Turns ON the servo power.

START

Makes the manipulator start playback operation.

MODE  
PLAY TEACH REMOTE

Selects operation mode.

HOLD

Stops operating manipulator temporarily while this button is held down.

PLAY

Enters play mode and enables playback operation for a job to which teaching has been completed.

OVERRUN RECOVERY

Depressing this key momentarily releases limit switch overruns and shock sensor trips.

TEACH

Enters teach mode and enables axis operation and editing operation on the programming pendant.

AC100V 0.5A

Power for floppy disk drive (FC1).

REMOTE

Enters remote mode and enables playback operation by instructions through an external computer.

RS-232 (D-SUB) connector. Connects with an external recorder, printer, or personal computer.

CYCLE  
AUTO 1 CYCLE STEP

Selects operating cycle in playback operation.

(POWER)

Key-lock switch. Turns ON and OFF main power remote from the controller.  
· This switch is optional.

AUTO

Operates the selected job repeatedly.

(EDIT LOCK)

Key-lock switch. Prohibits the editing operation from the programming pendant or the operator's panel (option) at ON position.  
· This switch is optional.

1 CYCLE

Operates the selected job once.

STEP

Operates one step of the job each time the STEP key is depressed.

# KEY FUNCTION

## PROGRAMMING PENDANT

E. STOP  Turns OFF servo power.

 SERVO POWER ON Turns ON manipulator drive power.

[SOFT KEYS] Corresponds to the function of soft key labels at the bottom of the screen.

 MORE Calls up the next five soft key labels of the same level while the "→" symbol appears at the lower right portion.

 Moves the soft key cursor.

 ENABLE Enables the axis operation on the programming pendant while this key-lamp is lit. When this key is depressed again, the lamp goes OFF indicating that the enabled state has been cleared.

 GROUP AXES Switches the group of axes to be operated or taught.

<Using with another key>  
\* + 

Group axes to be operated can be selected.

 DISP Enters display mode and enables selection of various display menu.

 EDIT Enters edit mode and enables editing operation of jobs and data.

 Registers a new job or calls an already registered job or sets up conditions.

 FUNC Selects optional functions.

 Enables to use the customized function.

Selects coordinate system for manual operation.

<Using with another key>  
\* + 

The coordinate No. can be changed when tool or user lamp is lit.

MAN SPD Sets the speed for manual operation (including FORWARD/BACKWARD).

<Using with another key>  
 

"SLOW" speed is chosen.

HIGH SPD During manual operation, depress this key while holding down any of the axis keys. The manipulator moves at the high speed while the keys are held down. Speed changing operation can be skipped.

MOTION TYPE Selects motion type at playback operation.

<Using with another key>  
\* + 

Motion type is changed to special linear motion.

[Axis keys]

Moves specified axis on manipulator in specified coordinates while the key is depressed.

<Using with another key>  
\* + 

Moves base axis when "robot axes" is selected.

Moves the cursor on the CRT display in the direction of the arrows.

<Using with another key>

[Cursor keys]

 +  Moves the cursor to the upper-left portion of the display.

 +  Switches the message if there are two or more messages.

\* +  Goes to the previous page.

\* +  Goes to the next page.

\* +  Scrolls the display toward right.

\* +  Scrolls the display toward left.

Moves the manipulator to check a series of taught steps as a continuous movement, while this key and [FWD] are depressed at the same time.

<Using with another key>

[TEST START] + [FWD]

The manipulator continuously moves as taught in steps.

Release [TEST START] to stop the manipulator immediately.

Moves the manipulator in the locus of taught steps, while the key is depressed.

<Using with another key>

[\*] + [FWD]

The manipulator executes all instructions except move instructions.

Moves the manipulator moves in the locus of taught steps in the reverse direction while the key is depressed.

Halts the manipulator and the lamp lights indicating the hold state. When the key is depressed again, the lamp goes OFF indicating that the hold state has been cleared.

Changes the station axis data among already taught position data.

Performs the following operation during playback.

- Positioning to the taught point
- Setting of positioning zone level

Sets the motion speed at playback.

Cancels erroneous input data or clears error status.

Deletes instructions and data already taught.

Inserts new instructions and data.

Modifies position data, instructions, and data already taught.

Designates the execution of each process for registering instructions, data, current position of the manipulator.

[Direct Open]

Displays the contents of the job or condition file on which the cursor is placed.

[Reserved Display Call]

Calls reserved display.

<Using with another key>

[\*] + Reserved Display Call

The display being currently displayed is registered as a reserved display.

When this key and any of the following keys are depressed at the same time, the function of the latter key changes.

[Number keys]

Depress these keys when the ">" prompt is displayed on the input line to enter the number or symbol indicated on the upper left on the key top.

Registers the necessary reference point (wall point, corner auxiliary point, etc) to move the manipulator at weaving.

<Using with another key>

[REF PNT] + [FWD]

Moves the manipulator to the reference point.

Registers timer instructions and changes set value.

# MANIPULATOR AXIS NAMES

With YASNAC MRC, external axes are classified into base and station axes.

Accordingly, individual axes of the robot system are classified by their function to robot, base and station axes.

Teaching coordinated operation to two manipulators or to a manipulator and a station became easier by dividing conventional external axes to base and station axes.

# COORDINATE SYSTEMS

The following coordinate systems control manipulator operation.

## JOINT COORDINATE SYSTEM

In joint coordinate system, each axis of the manipulator operates independently.

**NOTE**

- Depressing two or more keys results in a mixture of motion.
- None of the axes operate when two direction keys in one axis are depressed simultaneously (such as  $X^- + X^+$ ).

Axis keys

**S-AXIS** -Turns the body-

**L-AXIS** -Moves the lower arm back and forth-

**U-AXIS** -Moves the upper arm up and down-

**R-AXIS** -Turns the upper arm-

**B-AXIS** -Moves the wrist up and down-

**T-AXIS** -Turns the wrist-

# COORDINATE SYSTEMS

## ■ RECTANGULAR COORDINATE SYSTEM

The manipulator moves in parallel to X, Y, and Z-axes.

\* : Wrist axis performs TCP fixed motion.

# ■ CYLINDRICAL COORDINATE SYSTEM

The  $\theta$ -axis moves around the S-axis. The r-axis moves in parallel to the L-axis arm. Z-axis makes the same movement as that of linear coordinate system.

\* : Wrist axis performs TCP fixed motion

**NOTE**  $\begin{matrix} X^- & X^+ \\ S^- & S^+ \end{matrix}$  makes the same movement as that of joint coordinate system.

# COORDINATE SYSTEMS

## TOOL COORDINATE SYSTEM

The tool coordinates are defined at the tip of the tool, assuming that the effective direction of the tool mounted on the manipulator wrist flange is Z-axis. Therefore, the tool-coordinate-axis direction moves with the wrist.

In tool coordinate system motions, the manipulator can be moved using the effective tool direction as a reference regardless of the manipulator position or orientation. These motions are best suited when the manipulator is required to move parallel while maintaining the tool orientation with the workpieces.

\* : Wrist axis performs TCP fixed motion.

## USER COORDINATE SYSTEM

The manipulator moves in parallel to the axes of a specified user coordinate system.

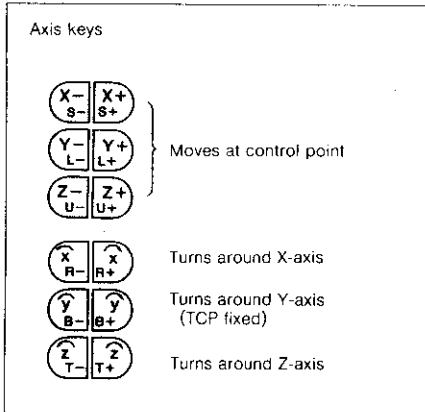

\* : Wrist axis performs TCP fixed motion.

## TCP FIXED FUNCTION

TCP fixed function is possible to change only wrist orientation at a fixed TCP position in any coordinate system except joint coordinate system.

For using torch

For using gunspot

### Each Axis Rotation in TCP Fixed Motion

<Rectangular/Cylinder Coordinate System>

<User Coordinate System>

<Tool Coordinate System>

# SELECTING COORDINATE SYSTEM

## SELECTING COORDINATE SYSTEM

Depress **[COORD]**. Each time this key is depressed, coordinate systems are switched in the following order. Verify the selection by the "COORD" lamp.

- COORD
- JOINT
- WLD/CYL
- TOOL
- USER

### NOTE

Different manual speeds are kept in memory for the joint coordinate system and other coordinate systems. When switching from the joint coordinate system to another coordinate system, or vice versa, manual speeds are switched at the same time.

## SELECTING RECTANGULAR/CYLINDRICAL COORDINATE SYSTEM

After selecting rectangular/cylindrical by the **[COORD]** key, select the rectangular or cylindrical coordinate system by the following procedure. Initial selection is the cylindrical coordinate system.

**1** Depress **[SELECT]** on the programming pendant or **[TEACH]** on the playback box to display hidden softkey labels.

Programming Pendant

Playback Box

! Set required function				
T-LOCK	NEW JOB	RSV JOB	SEL JOB	MJ CALL →

**2** Depress **[MORE]**, and the following soft key label is displayed.

UNLOCK	LIMIT			
RLY OPN	CYCLE	MJ RGTR	CONDI	COND2 →

**3** Depress **[F4]** [CONDI].

The teach condition 1 setup display appears.

J : JOB1	S : 001	TEACH	AUTO	STOP	SEL
TEACH CONDITION-1					
1. RECT(●)/CYL(○)	● : ON	○ : OFF	SET		
2. MOVE INSTRUCTION SET					
NEXT(●)/NEXT STEP(○)					
3. JOB EDIT LOCK ON					
STEP CHANGE PROHIBIT ONLY(●)					
4. SPEED CHANGE : CONT(●)/SNGL : (○)					
5. MASTER JOB CHNGE PROHIBIT(●)					
! Select item using cursor keys.					
		ON	OFF	QUIT	

**4** Place the cursor on the line "1. RECT (●)/CYL (○)."

• To set Rectangular Coordinate :

Depress **[F3]** [ON].

"●" is entered in the "SETUP" area on the right end, indicating that the rectangular coordinate system is selected.

1. RECT(●)/CYL(○) ●

• To set Cylindrical Coordinate :

Depress **[F4]** [OFF].

"○" changes to "○" in the "SETUP" area on the right end, indicating that the cylindrical coordinate system is selected.

1. RECT(●)/CYL(○) ○

**5** After setting, depress **[F5]** [QUIT].

# FLOW OF OPERATION

This paragraph gives operation charts from when the YASNAC MRC power supply is turned ON to when it is turned OFF after job registration, teaching, etc. for convenience.

## 1 POWER ON TO JOB REGISTRATION

MAIN POWER → SERVO POWER → TEACH FOR MODE →

F1 [T-LOCK] → F2 [NEW JOB] →

(SYSTEM WITH STATION AXIS)  
 [0] ~ [9] → ENTER → MOVE THE CURSOR TO DESIRED ROBOT AXIS. → ENTER  
 [Δ] → F1 [ABC] → CURSOR → ENTER → F5 [QUIT]

\* Edit mode enters automatically at this time.

## 2 TEACHING

For handling

### Step 1 : Start position.

- 1 Verify that the edit mode is entered and depress **ENABLE**.
- 2 Move the manipulator to a safe and convenient place for operation by using the axis keys.
- 3 Switch **MOTION TYPE** to **JOINT** and set the speed by **PLAY SPD** + **↑** or **↓**. Then depress **ENTER**.

### Step 2 : Near operation start position.

Use axis keys to move the manipulator to the position at which it can operate (welding or handling) and depress **ENTER**.

### Step 3 : Operation (welding or handling) start position.

- 1 Depress MAN SPD key **SLW** or **FST** and set the speed to "MED".
- 2 Use axis keys to move the manipulator at the position set in Step 2 to the operation start position. Set the speed by **PLAY SPD** → **↑** or **↓** and depress **ENTER**.

### Step 4 : Operation completion position.

- 1 Determine the position to complete operation and switch **MOTION TYPE** to **LINEAR**.
- 2 Set the speed by **PLAY SPD** → **↑** or **↓** and depress **ENTER**.

# FLOW OF OPERATION

Step 5 : Positon away from operation end point ; jig is not bumped.

- 1 Depress MAN SPD key **SLW** or **FST** and set the speed to "FST".
- 2 Use axis keys to move the manipulator to a place where the jig is not bumped and switch **MOTION TYPE** to **JOINT**.
- 3 Set the speed by **PLAY SPD** → **↑** or **↓** and depress **ENTER**.

Step 6 : Near start position.

Use axis keys to move the manipulator near the start position and depress **ENTER**.

## 3 OVERLAPPING FIRST AND LAST STPES

For handling

- 1 Return the cursor to the start of the job by **↑** + **↓**.
- 2 Depress **↓** once and move the cursor to Step 1.
- 3 Depress **FWD** and move the manipulator to Step 1.
- 4 Depress **↑** three times and match the cursor to the last step (Step 6).
- 5 Depress **MODIFY** → **ENTER**, and the first step (Step 1) and the last step (Step 6) are in the same position.

## 4 STEP VERIFICATION

- 1 Depress **DISP** → **F1** [JOB] to display the job text.
- 2 Return the cursor to the start of the job by **↑** + **↓**.
- 3 Depress **↓** once and move the cursor to Step 1.
- 4 Depress MAN SPD key **SLW** or **FST** and set the speed to "MED" and verify each step by using **FWD**. After verification, return the cursor to the start of the job by using **↑** + **↓**.

- 5 Verify that "1 CYCLE" is entered and play back all steps (1 to 6) by **TEST START** + **FWD**

**NOTE** If "1 CYCLE" is entered, perform the following operation.

- In programming pendant : **SELECT** → **MORE** → **F2** [CYCLE] → **F2** [1 CYCLE]
- Depress **1 CYCLE** in playback box.

## 5 JOB MODIFICATION

### ● Before modification

- 1 Depress **DISP** → **F1** [JOB] to display the job data screen.
- 2 Depress **EDIT** to enter the edit mode.
- 3 The following modification is performed.

- Modify step position data. ....To (1)
- Add a step. ....To (2)
- Delete a step. ....To (3)
- Modify speed between steps. ....To (4)

### (1) Modify step position data.

- 1 Depress **FWD** and move the cursor to the step to be changed. At the same time, the manipulator moves to that step.
- 2 Use axis keys to move the manipulator to the position to be changed and depress **MODIFY** → **ENTER**.

### (2) Insert a step.

- 1 Depress **FWD** and move the cursor to the one step before the step to be inserted. At the same time, the manipulator moves to that step.
- 2 Use axis keys to move the manipulator to the position where the step is to be inserted and depress **INSERT** → **ENTER**.

# FLOW OF OPERATION

(3)Delete a step.

- 1 Depress **FWD** and move the cursor to the step to be deleted.  
At the same time, the manipulator moves to that step.
- 2 Use axis keys to verify that the cursor is at the step to be deleted and depress **DELETE** → **ENTER**.

(4)Modify speed between steps.

⟨How to change⟩

- Modify by **MODIFY** → **PLAY SPD** .....To (1)
- Modify according to play speed type. ....To (2)
- Modify in the ratio for current play speed. ...To (3)

1 Modify by **MODIFY** → **PLAY SPD**

- ① Move the cursor to the step to be changed and depress **MODIFY**.
- ② Set the speed by **PLAY SPD** → **↑** or **↓** and depress **ENTER**.

2 Modify according to play speed type (single rewrite).

- ① Depress **TEACH** → job text displayed → **EDIT** → **→** (when the cursor is in the address area.)
- ② Move the cursor to the play speed to be changed.

(To change the speed to the same value in other steps):  
**F1** [SKIP] → **ENTER** → **F5** [QUIT]

**F1** [SKIP] omitted for continuous rewrite.

3 Modify in the ratio for current play speed (1 to 200%).  
 (For relative change, single rewrite)

- ① Depress **TEACH** → job text displayed → **EDIT** → **→** (when the cursor is in the address area.)
- ② Move the cursor to play speed to be changed.

③ **F2** [SPEED] → **F5** [REL] → **0** ~ **9** (Input ratio for play speed.) → **ENTER** →

(To change the speed to the same value in other steps)

**F1** [SKIP] → **ENTER** → **F5** [QUIT]

**F1** [SKIP] omitted for continuous rewrite.

After completion of correction, move the manipulator near Step 1 by axis keys.  
Then, return the cursor to the start of the job using **↑** + **↓**.

## 6 RELEASING TEACH LOCK

- 1 Depress **ENABLE** to extinguish the lamp.
- 2 Depress **SELECT** → **MORE** → **△** → **F1** [UNLOCK].

## 7 PLAYBACK

- 1 Verify that there is no man near the manipulator.
- 2 Depress **PLAY** → **1 CYCLE** → **START**.

## 8 POWER OFF

**E.STOP** → **MAIN POWER OFF**

## OTHER OPERATION (REFERENCE)

### ■ JOB CALL

A job which has been registered is called.

### ■ JOB MASTER REGISTRATION AND CALL

Once a job is registered as a master job, it can be called easily.

- 1 Register a job as a master job.

- 2 Call the master job.

- In teach mode → TEACH → F5 [MJ CALL]
- In play mode → When depressing PLAY or in the play mode :  
SELECT → F2 [MJ CALL]

### ■ JOB COPY

A registered job is copied to create another job.

- Job header screen

- Job list screen

### ■ JOB DELETE

A registered job is deleted.

- Job header screen

- Job list screen

# BASIC OPERATION (POWER ON)

Turn ON the main power first, then the servo power. Before turning ON the power, be sure to check that nobody is near manipulator.

**1**

Turn ON the main power.

**NOTE** The manipulator is not yet operable.

Turn ON the main power switch provided on the front of the controller.

The main power is turned ON and the playback box and the programming pendant become operable.

The initial display appears as shown below.

J:*****	S:***	TCH	CYCLE	STOP	DISP
YASNAC MRC					
! Turn ON servo power.					
JOB	POSN	FILE	VAR	DIAG	→

Title Display

**2**

Turn ON the servo power.

or

Depress **SERVO POWER** either on the playback box or programming pendant.

The power supply for driving the manipulator has been turned ON.

# BASIC OPERATION (TEACHING)

## ■ PREPARATION FOR TEACHING

Before starting teaching, follow the steps below :

- Set the operation mode to teach mode and set up teach-lock.
- Enter a job name.
- Set the screen mode to edit mode.

**1**

Enter the teach mode.

Depress **TEACH** on the playback box.

“TEACH” is displayed in the status area.

**2**

Enter teach-lock.

**NOTE**

Be sure to set teach-lock for safety.

Depress **F1** [T-LOCK] .

In the status area, the indication of mode “TEACH” changes to “LOCK”.

**NOTE**

While teach-lock is set, the mode of operation is tied to teach mode and cannot be switched if attempted using the playback box or external input.

**3**

Enter a job name.

Depress **F2** [NEW JOB] .

J : *****	S : ***	LOCK	CYCLE	STOP	SEL
JOB LIST (SORTING)					
TEST-1	TEST-2	WORK-1	WORK-2		
WORK-3	WORK-4				
> <input type="text"/>					
! Set cursor on character					
ABC	SYMBOL				
CAP/LC	←	BACK SP	→	QUIT	

The job list appears.

Job names that have already been registered are displayed.

Job names that have already been registered.

Job List Display

**4**

Depress **1** and **0** in that order.

Job names can be registered using alphabets and numbers. Follow the steps to register a new job name "10A".

> 10 <input type="text"/>					
! Set cursor on character					
ABC	SYMBOL				
CAP/LC	←	BACK SP	→	QUIT	

"10" is displayed on the entry line.

Then input "A".

Move the cursor to "A" on the alphabet screen and depress **ENTER** .

ABC									
A	B	C	D	E	F	G			
H	I	J	K	L	M	N			
O	P	Q	R	S	T	U			
V	W	X	Y	Z					

Character entry is completed by **F5** [QUIT] .

"10A" is displayed on the entry line.

> 10 <input type="text"/>					
! Set cursor on character					
ABC	SYMBOL				
CAP/LC	←	BACK SP	→	QUIT	

# BASIC OPERATION (TEACHING)

5

EDIT mode is entered automatically

J : 10A	S : 000	LOCK	CYCLE	STOP	EDIT
JOB CONTENT					
L : S :	INSTRUCTIONS				TOOL : *
0000 000	NOP				
0001	END				
! Select instruction group					
MOTION	ARITH	SHIFT			
IN/OUT	CONTROL	DEVICE	PRIOR	SAME	

Depress **ENTER** .

When the system has no station axis :  
The job name "10A" is registered in memory of YASNAC MRC and displayed in the status area.

At the same time, the job contents appear and NOP and END instructions are automatically registered.

**NOTE** The screen mode is changed to EDIT automatically.

When the system has station axes :  
Follow steps 6 and 7 below.

6

J : 10A	S : 000	LOCK	CYCLE	STOP	SEL
GROUP COMBINATION					
GROUP AXIS MASTER					
R 1					NO GROUP AXIS
R 2					
R 1 + S 1					
R 1 + R 2	R 1				
!					

Group Combination Select Display

For a system with station axes, the group combination select display appears after **ENTER** is depressed.

"R1" and "S1" stand for a manipulator (robot) axis and station axis, respectively.

7

J : 10A	S : 000	LOCK	CYCLE	STOP	EDIT
JOB CONTENT					
L : S :	INSTRUCTIONS				TOOL : *
0000 000	NOP				
0001	END				
! Select instruction group					
MOTION	ARITH	SHIFT			
IN/CUT	CONTROL	DEVICE	PRIOR	SAME	

Job Text Display

Move the cursor to "R1" and depress **ENTER** .

Assume that job "10A" is to be executed by the manipulator numbered as "R1" .

The job name "10A" is registered in memory of YASNAC MRC and the job contents appear.

The job name "10A" is displayed on the left end of the status area. NOP and END instructions are automatically registered.

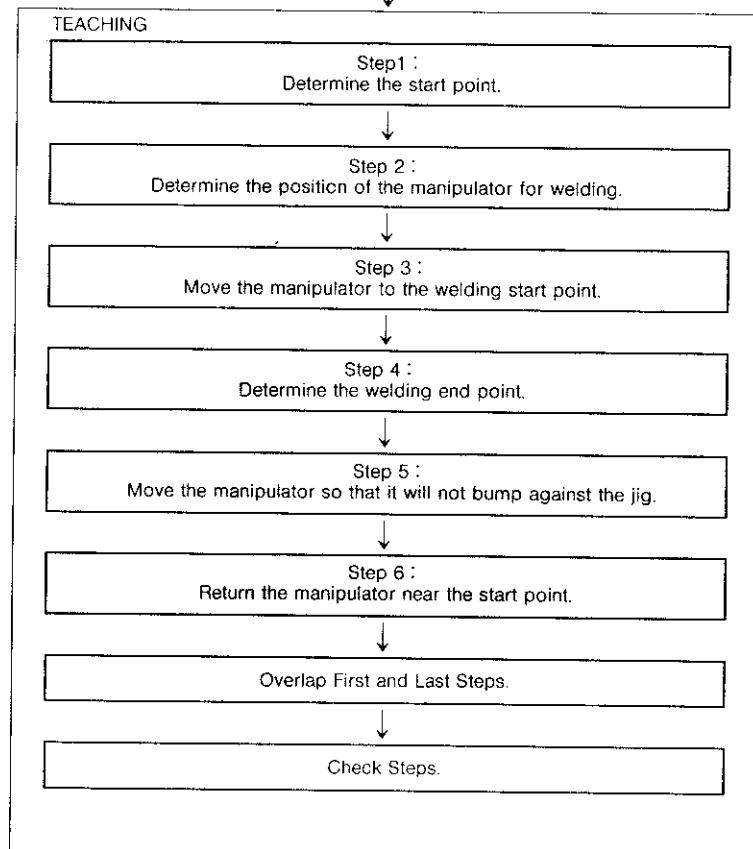

## TEACHING

In this section, a welding job from point A to point B of the workpiece shown below will be taught to the manipulator. This job consists of Step 1 to Step 6.

Safety Check

- Check on the screen of the programming pendant that the operation mode is "LOCK".
- Check that there is safe clearance around the manipulator.

# BASIC OPERATION (TEACHING)

## STEP 1

Step 1 is the start point. The point must be always safe and ready for starting the work.

## 1

Check that "EDIT" is displayed on the right end of the status area.

**NOTE** If the edit mode is not entered, depress **EDIT** on the programming pendant to enter edit mode.

## 2

Make the manipulator operable.

Depress **ENABLE** key.

## 3

**NOTE** The point must be always safe and ready for starting the work.

**4**

Choose joint motion type.

Depress **MOTION TYPE**.

J : 10	S : 000	LOCK	CYCLE	JOINT	EDIT
--------	---------	------	-------	-------	------

“JOINT” is displayed in the status area.

**5**

Depress **PLAY SPD** to set operation speed by moving the cursor using **↑** or **↓**.

SPEED TO BE SET →

6	:	25.00%
7	:	50.00%
8	:	100.00%

Set the speed to “7 : 50.00%”.

**6**

Depress **ENTER**.

Step 1 is registered.

STEP 1 IS REGISTERED. →

L :	S :	INSTRUCTIONS
0000	000	NOP
0001	001	MOVJ VJ=50.00
0002		END

# BASIC OPERATION (TEACHING)

## STEP 2

Step 2 is near the welding start position. The welding posture of the manipulator is determined.

### 1

Set the manipulator to a welding posture (Step 2) using the axis keys.

### 2

Depress **ENTER**.

Step 2 is registered.

```

STEP 2 IS REGISTERED.
L: S: INSTRUCTIONS
0000 000 NOP
0001 001 MOVJ VJ=50.00
0002 002 MOVJ VJ=50.00
0003 END
    
```

**STEP 3**

Step 3 is the welding start point. Move the manipulator to the welding start point in the same posture as set in Step 2.

**1**

Set "MED" speed.

Depress manual speed keys **SLW** or **FST**.

**2**

Move the manipulator to the welding start point (Step 3) using the axis keys.

**NOTE**

Do not change the posture of the manipulator set in Step 2.

**3**

Depress **PLAY SPD** to set approaching speed by moving the cursor using **↑** or **↓**.

Set the speed to "5 : 12.50%".

SPEED TO BE SET	4 :	6.25%	0 : SPEED OMIT
	5 :	12.50%	
	6 :	25.00%	

**4**

Depress **ENTER**.

Step 3 is registered.

# BASIC OPERATION (TEACHING)

## STEP 4

In Step 4, the welding end point is determined.

1

Move the manipulator to the welding end point (Step 4) using the axis keys.

The manipulator can be moved around the workpiece. It does not have to be moved in the actual welding path along the workpiece.

2

Depress **MOTION TYPE** to switch motion type to linear.

"LINEAR" is displayed in the status area.

3

Depress **PLAY SPD** to set welding speed by moving the cursor using **↑** or **↓**.

Set the speed to "3 : 276 cm/min".

4

Depress **ENTER**.

Step 4 is registered.

**STEP 5**

In Step 5, the manipulator moves away from the welding end point so that it will not bump the jig.

**1**

Set "FST" speed.

Depress manual speed key  
**SLW** or **FST**.

**2**

Move the manipulator away from the jig using the axis keys.

**3**

Depress **MOTION TYPE** to switch motion type to joint.

"JOINT" is displayed in the status area.

# BASIC OPERATION (TEACHING)

**4**

Depress **PLAY SPD** to set moving speed by moving the cursor using **↑** or **↓**.

Set the speed to "7 : 50.00%".

SPEED TO BE SET		
6	:	25.00%
7	:	50.00%
8	:	100.00%

**5**

Depress **ENTER**.

Step 5 is registered.

L :	S :	INSTRUCTIONS
0000	000	NOP
0001	001	MOVJ VJ=50.00
0002	002	MOVJ VJ=50.00
0003	003	MOVJ VJ=12.50
0004	004	MOVL V=276
0005	005	MOVJ VJ=50.00
0006		END

STEP 5 IS REGISTERED.

**STEP 6**

In Step 6, the manipulator returns near the start point.

**1**

Move the manipulator near the start point (Step 6) using the axis keys.

**2**

Depress **ENTER**.

Step 6 is registered.

```

L:  S:  INSTRUCTIONS
0000 000  NOP
0001 001  MOVJ VJ=50.00
0002 002  MOVJ VJ=50.00
0003 003  MOVJ VJ=12.50
0004 004  MOVL V=276
0005 005  MOVJ VJ=50.00
STEP 6 IS REGISTERED. → 0006 006  MOVJ VJ=50.00
0007 007  END

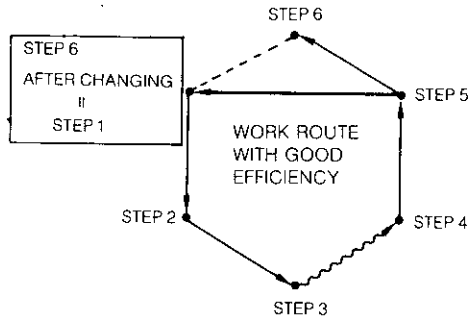

```

# BASIC OPERATION (TEACHING)

## OVERLAPPING FIRST AND LAST STEPS

Now the manipulator stops at Step 6, near Step 1. If the manipulator directly moves from the welding end point in Step 5 to Step 1, it can immediately start welding the next workpiece and work efficiency is improved.

The following teaching implements this by overlapping Step 6, the last point, and Step 1, the start point.

**1**

Depress + .

The cursor returns to the start of the job.

```
L: S: INSTRUCTIONS          TOOL: 0
0000 000  NOP
0001 001  MOVJ VJ=50.00
0002 002  MOVJ VJ=50.00
```

**2**

Depress once.

The cursor moves to Step 1.

```
L: S: INSTRUCTIONS          TOOL: 0
0000 000  NOP
0001 001  MOVJ VJ=50.00
0002 002  MOVJ VJ=50.00
```

**3**

Depress **FWD**.

The manipulator moves to Step 1.

4

Depress  three times to move the cursor to the last step (Step 6).

STEP 6 → 

0005	005	MOVJ VJ=50.00
0006	006	MOVJ VJ=50.00

5

Depress **MODIFY** and **ENTER**.

Step 6 position is changed to overlap with Step 1 position.

The job to operate is completed.

# BASIC OPERATION (TEACHING)

## ■ CHECKING STEPS

In the following, operate the manipulator to check that taught steps are correct.

**1**

Depress **DISP**.

Softkey label as shown on the left is displayed.

! Select display item				
JOB	POSN	FILE	VAR	DIAG →

**2**

Depress **F1** [**JOB**].

The job contents appear.

JOB CONTENT			TOOL : 0
L :	S :	INSTRUCTIONS	
0000	000	NOP	
0001	001	MOVJ VJ=50.00	
0002	002	MOVJ VJ=50.00	
0003	003	MOVJ VJ=12.50	
0004	004	MOVL V=276	
0005	005	MOVJ VJ=50.00	
0006	006	MOVJ VJ=50.00	

Job Content Display

**3**

Depress **↑** + **↓**.

The cursor returns to the start of the job.

START OF JOB →	L :	S :	INSTRUCTIONS	TOOL : 0
	0000	000	NOP	
	0001	001	MOVJ VJ=50.00	
	0002	002	MOVJ VJ=50.00	

**4**

Depress **↓** once.

The cursor moves to Step 1.

STEP 1 →	L :	S :	INSTRUCTIONS	TOOL : 0
	0000	000	NOP	
	0001	001	MOVJ VJ=50.00	
	0002	002	MOVJ VJ=50.00	

5

Set "MED" speed.

Depress manual speed keys

**SLW** or **FST**.

6

Depress **FWD** to check the motion of the manipulator step by step.

Each time **FWD** is depressed, the manipulator moves by single step.

7

After checking each step, depress **↑** + **↓** to move the cursor to the start of the job.

8

Perform the entire course (steps 1 to 6) all along.

Check that the operation cycle is set to "1 CYCLE" and depress **TEST START** and **FWD**.

\*If the operation cycle is not set to "1 CYCLE", set to "1 CYCLE" by either of the following ways :

- Depress **SELECT** and **MORE** to display soft key labels, then depress **F2** [1 CYCLE] → **F2** [1 CYCLE] .
- Depress **1 CYCLE** on the playback box.

Did the manipulator move as intended ?

# BASIC OPERATION (TEACHING)

## MODIFYING A JOB

After checking the motion of the manipulator in each step, positions may need to be changed, added, or deleted. To do this, follow the procedure below.

### BEFORE EDITING

**1**

Depress **DISP**.

Softkey label as shown on the left is displayed.

! Select display item				
JOB	POSN	FILE	VAR	DIAG →

**2**

Depress **F1 [JOB]**.

The job contents appear.

JOB CONTENT			TOOL : 0
L :	S :	INSTRUCTIONS	
0000	000	NOP	
0001	001	MOVJ VJ=50.00	
0002	002	MOVJ VJ=50.00	
0003	003	MOVJ VJ=12.50	
0004	004	MOVL V=276	
0005	005	MOVJ VJ=50.00	
0006	006	MOVJ VJ=50.00	

**3**

Enter the edit mode.

Depress **EDIT** to enter edit mode.

"EDIT" is displayed in the status area.

**NOTE** Check that "LOCK" is displayed.

J : 10	S : 000	LOCK	CYCLE	STOP	EDIT
--------	---------	------	-------	------	------

The following modification can be performed.

- Modifying step position data .....41
- Inserting a step .....42
- Deleting a step.....44
- Modifying speed between steps .....45

## MODIFYING STEP POSITION DATA

Modify the position registered in Step 2, using the following steps.

Depress  $\uparrow + \downarrow$  and depress  $\downarrow$  once to move the cursor to step 1 (refer to page 38). Depress **FWD**, and the manipulator moves to step 1 and step 2 in the order.

**1**

Depress **FWD** to move the cursor to Step 2, which is to be modified.

```
0001 001 MOVJ VJ=50.00
0002 002 MOVJ VJ=50.00
0003 003 MOVJ VJ=12.50
```

Each time **FWD** is depressed, the manipulator moves by a single step.

**2**

Move the manipulator to the modified position (new Step 2 position) using the axis keys.

**3**

Depress **MODIFY**.

**4**

Depress **ENTER**.

The position data are changed in the step.

POSITION DATA ARE CHANGED

```
0001 001 MOVJ VJ=50.00
0002 002 MOVJ VJ=55.00
0003 003 MOVJ VJ=12.50
```

# BASIC OPERATION (TEACHING)

## INSERTING A STEP

Assume that the workpiece is changed as shown in Fig. A. If the job that has been taught is executed as it is, the manipulator will bump against the workpiece. To avoid this, one step must be added as shown in Fig. B. Add the step as explained in the following.

Fig. A

Fig. B

**1**

Depress **FWD** to move the cursor to where the additional step is to be inserted.

Each time **FWD** is depressed, the manipulator moves by a single step.

ONE STEP BEFORE STEP TO BE INSERTED →

```

0004 004  MOV L V=276
0005 005  MOV J VJ=50.00
0006 006  MOV J VJ=50.00
0007 007  END
    
```

**2**

Move the manipulator to the position to be inserted using the axis keys.

3

Depress **INSERT** .

4

Depress **ENTER** .

A Step is inserted. Each time a step is added, the step numbers automatically increase.

INSERTED STEP  
STEP NO. IS  
AUTOMATICALLY  
INCREASED.

```
0004 004 MOVL V=276
0005 005 MOVJ VJ=50.00
0006 006 MOVJ VJ=50.00
0007 007 MOVJ VJ=50.00
0008     END
```

# BASIC OPERATION (TEACHING)

## DELETING A STEP

Delete the step that has been inserted, in the following steps. Delete one step from Fig.

A.

**1**

Depress **FWD** to move the cursor to the step to be deleted.

Each time **FWD** is depressed, the manipulator moves by a single step.

STEP TO BE DELETED

```
0004 004  MOV L V=276
0005 005  MOV J VJ=50.00
0006 006  MOV J VJ=50.00
0007 007  MOV J VJ=50.00
0008      END
```

**2**

Confirm that the cursor is at the step to be deleted.

Depress **DELETED**.

**3**

Depress **ENTER**.

Each time a step is deleted, the step numbers automatically decrease.

```
0004 004  MOV L V=276
0005 005  MOV J VJ=50.00
0006 006  MOV J VJ=50.00
0007      END
```

## MODIFYING SPEED BETWEEN STEPS

Change the speed at which the manipulator moves in the following steps.

The welding speed from Step 3 to Step 4 is to be decreased.

There are three ways to modify as follows :

- Modify by **MODIFY** → **PLAY SPD** . .....45
- Modify according to play speed type. ....46
- Modify in the ratio for current play speed. ....50

### ● Modify by **MODIFY** → **PLAY SPD** .

**1**

Move the cursor to Step 4 by the cursor keys.

```
STEP 4 → 0003 003 MOVJ VJ=12.50
          0004 004 MOVL V=276
          0005 005 MOVJ VJ=50.00
```

**2**

Depress **MODIFY** .

**3**

Depress **PLAY SPD** to set the speed by moving the cursor.

Set the speed to "2 : 138cm/min".

SPEED TO BE CHANGED	1	66cm/min
	2	138cm/min
	3	276cm/min

**4**

Depress **ENTER** .

The speed is changed.

```
SPEED IS CHANGED.
0003 003 MOVJ VJ=12.50
0004 004 MOVL V=138
0005 005 MOVJ VJ=50.00
```

# BASIC OPERATION (TEACHING)

## ● Modify according to play speed type. (Single rewrite)

This paragraph describes how to modify speed using play speed type VJ(joint speed) or V(control point speed) as an example.

**1**

Enter the teach mode.

Depress **TEACH**.

**2**

Depress **DISP**.

! Select display item					
JOB	POSN	FILE	VAR	DIAG	→

Softkey label shown on the left is displayed.

**3**

Depress **F1** [**JOB**].

JOB CONTENT				TOOL : 0
L :	S :	INSTRUCTIONS		
0000	000	NOP		
0001	001	MOVJ VJ=50.00		
0002	002	MOVJ VJ=50.00		
0003	003	MOVJ VJ=12.50		
0004	004	MOVL V=276		
0005	005	MOVJ VJ=50.00		
0006	006	MOVJ VJ=50.00		

The job contents appear.

Job Content Display

**4**

Enter the edit mode.

Depress **EDIT**.

When the cursor is in the address area, depress **→** to move the cursor to the instruction area.

LINE ED	SPEED			DIS CHG →
---------	-------	--	--	-----------

**5**

Move the cursor to the line of play speed to be modified using the cursor key.

CURSOR →	0003 003 MOVJ VJ=12.50
	0004 004 MOVL V=276
	0005 005 MOVJ VJ=50.00

Steps below the cursor line are to be modified.

**6**

Depress **F2** [**SPEED**].

The softkey label of play speed types is displayed.

VJ	V	VR	VE	REL →
----	---	----	----	-------

**7**

Select the type of play speed to be modified.

Depress either **F1** [VJ] or **F2** [V].

# BASIC OPERATION (TEACHING)

**8**

Enter the desired play speed using the number keys.

**9**

Depress **ENTER**.

```

0003 003 MOVJ VJ=12.50
0004 004 MOVJ V=150
0005 005 MOVJ VJ=50.00
    
```

TO BE MODIFIED. →

The play speed at the cursor is modified.

>V=150				
I				
SKIP				QUIT

The softkey label is as shown on the left.

**10**

To change the speed in the other steps to the same value, perform the following steps.

Depress **F1** [SKIP] to move the cursor to the next step to be modified.

**NOTE** **F1** [SKIP] is omitted for continuous rewrite.

(Example)

```

0016 010 MOVJ V=150 PL=0
0017 011 MOVJ VJ=25.00
0018 012 MOVJ V=150
    
```

TO BE MODIFIED →

Depress **ENTER** to modify the play speed at the cursor.

---

※When the play speed at the cursor line  
(for example, Step 18) is not modified,  
depress **F1** [SKIP] .

(Example)

TO BE MODIFIED	0017 011	MOVJ VJ=25.00
NEXT	0018 012	MOVL V=150
	0019 013	MOVL VJ=28.00

The cursor moves to the next step to be modified.

By repeating **10** , the play speed in the other steps can be changed to the same value.

---

**11**

Depress **F5** [QUIT] .

# BASIC OPERATION (TEACHING)

- **Modify in the ratio for current play speed.**  
**(For relative change, single rewrite)**

Relative change is the method to specify the ratio (1 to 200%) for current speed and change the speed to the value decreased according to the ratio.

All steps can be changed disregarding to play speed type.

**1**

Enter the teach mode.

Depress TEACH.

**2**

Depress DISP.

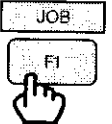

! Select display item				
JOB	POSN -	FILE	VAR	DIAG →

The softkey label shown on the left is displayed.

**3**

Depress F1 [JOB].

JOB CONTENT			TOOL : 0
L :	S :	INSTRUCTIONS	
0000	000	NOP	
0001	001	MOVJ VJ=50.00	
0002	002	MOVJ VJ=50.00	
0003	003	MOVJ VJ=12.50	
0004	004	MOVL V=276	
0005	005	MOVJ VJ=50.00	
0006	006	MOVJ VJ=50.00	

Job Content Display

The job contents appear.

**4**

Enter the edit mode.

Depress **EDIT**.

When the cursor is in the address area, depress **→** to move the cursor to the instruction area.

**5**

Move the cursor to the line of play speed to be modified using the cursor key.

Steps below the cursor line are to be modified.

**6**

Depress **F2** [**SPEED**].

The softkey label of play speed types is displayed.

**7**

Depress **F5** [**REL**].

# BASIC OPERATION (TEACHING)

8

Enter the ratio for the current play speed using the number keys.

The ratio must be a value between 1 to 200 (%).

9

Depress **ENTER**.

TO BE MODIFIED.

```

0003 003 MOVJ VJ=12.50
0004 004 MOVL V=50
0005 005 MOVJ VJ=50.00
    
```

The play speed at the cursor is modified.

>50				
?				
SKIP				QUIT

The softkey label changes as shown on the left.

10

To change the speed in the other steps to the same value, perform the following steps.

Depress **F1** [SKIP] to move the cursor to the next step to be modified.

**NOTE** **F1** [SKIP] is omitted for continuous rewrite.

(Example)

TO BE MODIFIED. →

```

0020 012 MOVJ VJ=25.00
0021 013 MOVL V=511
0022      JUMP*A
    
```

Depress **ENTER** to modify the play speed at the cursor.

※When the play speed at the cursor line (for example, Step 21) is not modified, depress **F1** [SKIP] .

TO BE MODIFIED. → 

0020	012	MOVJ	VJ=25.00
0021	013	MOVL	V=1122
0022		JUMP	*A

The cursor moves to the next step to be modified.

By repeating **10** , the play speed in the other steps can be changed to the same value.

**11**

Depress **F5** [QUIT] .

Next basic operation is playback.

Before playback, be sure to perform the following so that the manipulator will not start moving from a half-way step.

- |  |
|--|
| <p>① Move the manipulator near Step 1 using the axis keys.<br/>② Depress <b>↑</b> + <b>↓</b> to return the cursor to the start of the job.</p> |
|--|

# BASIC OPERATION (PLAYBACK)

## RELEASING TEACH-LOCK

Before playback operation, release teach-lock.

1

Depress **ENABLE** , and check that the **ENABLE** lamp is OFF.

**NOTE** Be sure to check that **ENABLE** lamp is OFF.

2

Depress **SELECT** .

! Set required function				
T-LOCK	NEW JOB	RSV JOB	SEL JOB	MJ CALL →

The softkey label on the left is displayed.

3

Depress **MORE** .

UNLOCK	LIMIT			
RLY OPEN	CYCLE	MJ RGTR	COND 1	COND 2

The softkey label on the left is displayed.

4

Depress **↑** and **F1** [**UNLOCK**] .

J : 10	S : 000	TEACH	CYCLE	STOP	SEL
--------	---------	-------	-------	------	-----

In the status area, mode indication "LOCK" is changed to "TEACH".

## ■ PLAYBACK

Let's move the manipulator from the beginning.

Before starting, make sure there is nobody around the manipulator for safety reasons.

1

Enter the play mode.

Depress **PLAY** on the playback box.

In the status area, mode indication "TCH" is changed to "PLAY".

2

If the operation cycle is not one-cycle, depress **1 CYCLE** on the playback box.

In the operation cycle field of the status area, "CYCLE" is displayed.

3

Depress **START** on the playback box.

The manipulator moves the taught steps for a single cycle, then stops.

Did the manipulator move just as it was taught ?

# BASIC OPERATION (POWER OFF)

After operation, turn the power OFF.

1

Turn OFF the servo power.

Playback Box

E.STOP

Programming Pendant

E.STOP

Depress either **E. STOP** button on the playback box or the programming pendant. When the servo power is turned OFF, the mechanical brake is activated and the manipulator stops.

**E. STOP** can be applied anytime, in any mode.

2

Turn OFF the main power.

Turn OFF the main power switch on the controller.

Now, all the basic operation has been completed.

# OTHER OPERATION

## ■ JOB CALL

A job which has been registered is called.

## ■ JOB COPY

**JOB HEADER DISPLAY :**  
Displays and edits comments, registering date, edit prohibited status, etc.

**JOB LIST DISPLAY :**  
(Sorting, Recording)  
Displays the registered jobs by in the character code order or displays them in the registering order.

A new job is created by copying a registered job. Job copying is available when the job header display or job list is displayed.

### JOB HEADER DISPLAY

The job being edited is used as the source job on the job header display.

#### How to Display

- When any job is not selected, perform the following operation.  
**TEACH** → **F4** [SEL JOB] → **CURSOR** or character input operation to select a job (refer to page 61).  
 → **ENTER** (job content display) → to 2
- When a job is selected, perform the following operation.  
**DISP** → **F1** [JOB] → **F1** [DIS CHG] → **F1** [HEADER]  
 → job header display

J :	WORK-A	S :	003	LOCK	CYCLE	STOP	DISP
JOB HEADER							
JOB NAME : WORK-A							
COM : [100mmjob]							
DATE : 1992.12/11 10:00							
CAP : 1024BYTES							
LINES : 30LINES STEPS : 20STEPS							
EDIT LOCK : [OFF]							
TO SAVE TO FLOPPYDISK : NOT DONE							
GROUP SET : R   +S							
! Select item							
SUB HD	CAP						
HEADER	JOB TXT	CMD POS	LIST 1	LIST 2			

Job Header Display

1

Enter the edit mode.

Depress **EDIT**.

COPY	DELETE	ED LOCK	JOB NAME	CMT NAM
------	--------	---------	----------	---------

The softkey label shown on the left is displayed.

# OTHER OPERATION

**2**

Perform copy operation.

Depress **F1** [COPY].

J : 10A	S : 000	LOCK	CYCLE	STOP	EDIT
JOB COPY					
ORIGINAL		DESTINATION			
10A		→			
> 10A					
! Enter new JOB name					
ABC	SYMBOL				
CAP/LC	←	BACKSP	→	QUIT	

Job Copy Display

The job copy display appears.

**3**

Input a new job name.

<When using the job name on the input line>

Move the cursor to the character to be modified, delete it and input a new job name.

Or

To "B" to be input

<When not using the job name on the input line>

Delete the character by **CANCEL**

Depress **CANCEL** to delete the character in the input line and input a new job name.

Or

To "B" to be input

> 10B

The character is input.

**4**

Depress **ENTER** .

ORIGINAL	DESTINATION
10A	→ 10B
! Depressing EXECUTE softkey copies JOB	
	CANCEL EXECUTE

The job name in the input line is displayed in the "DESTINATION" area.

**5**

Depress **F5** [EXECUTE] .

Job copy starts.

J : 10B	S : 000	LOCK	CYCLE	STOP	EDIT
JOB HEADER					
JOB NAME : 10B					
COM : 100mm					

After completion of job copy, the job header display of the copy destination job appears.

Depressing **F4** [CANCEL] stops job copy.

# OTHER OPERATION

## JOB LIST DISPLAY

The source job is selected from stored jobs on the job list display (sorting, recording).

### How to Display

- When a job is not selected, perform the following operation:  
**TEACH** → **F4** [SEL JOB] → **CURSOR** or character input operation to select a job (refer to page 61). → **ENTER** (job content display) → to 2
- When a job is selected, perform the following operation:  
**DISP** → **F1** [JOB] → **F1** [DIS CHG]  
**F4** [LIST 1] → Job list display (sorting order)  
**F5** [LIST 2] → Job list display (registering order)

J	WORK-A	S	003	LOCK	CYCLE	STOP	DISP
JOB LIST (SORTING)							
JOB-1	JOB-2	TEST140	WORK-A				
WORK-B							

Job List Display (Sorting)

J	WORK-A	S	003	LOCK	CYCLE	STOP	DISP

00001	TEST140	100(024)	10/11 08:45	●			
00002	JOB-1	238(105)	10/11 14:19	●			
00003	WORK-A	555(110)	10/15 09:03	○			
00004	WORK-B	309(084)	10/22 11:25	●			
00005	JOB-2	201(040)	10/23 15:30	○			

Job List Display (Recording)

1

Enter the edit mode.

Depress **EDIT**.

COPY	DELETE	ED LOCK	JOB NAME	CMT NAME

2

Move the cursor to the job to be copied.

3

Let's start copy operation.

Depress **F1** [JOB COPY].

J	10A	S	000	LOCK	CYCLE	STOP	EDIT
JOB COPY							
	ORIGINAL		DESTINATION				
	10A		→				
> 10A							
! Enter new JOB name							
ABC	SYMBOL						
CAP/LC	←	BACKSP	→				QUIT

The job copy display appears.

Job Copy Display

**4**

Or

To "B" to be input

Delete the character by **CANCEL**

Or

To "B" to be input

> 10B

Input a new job name.

<When using the job name on the input line>

Move the cursor to the character to be modified, delete it and input a new job name.

<When not using the job name on the input line>

Depress **CANCEL** to delete the character in the input line and input a new job name.

The character is input.

**5**

ORIGINAL	DESTINATION
10A	→ 10B
! Depressing EXECUTE softkey copies JOB	
	CANCEL    EXECUTE

Depress **ENTER**.

The job name in the input line is displayed in the "DESTINATION" area.

**6**

Depress **F5** [EXECUTE].

Job copy starts. After completion of job copy, the job list display appears.

Depressing **F4** [CANCEL] stops job copy.

# OTHER OPERATION

## ■ JOB DELETION

Registered jobs can be deleted. Job deleting is available when the job header display or job list is displayed.

### JOB HEADER DISPLAY

The job being edited is deleted on the job header display.

#### How to Display

- When any job is not selected, perform the following operation.  
**TEACH** → **F4** [SEL JOB] → **CURSOR** or character input operation to select a job (refer to page 61). →  
**ENTER** (job content display) → to 2
- When a job is selected, perform the following operation.  
**DISP** → **F1** [JOB] → **F1** [DIS CHG] →  
**F1** [HEADER] → job header display

J : WORK-A	S : 003	LOCK	CYCLE	STOP	DISP
JOB HEADER					
JOB NAME : WORK-A					
COM : [100mmjob]					
DATE : 1992.12/11 10:00					
CAP : 1024BYTES					
LINES : 30LINES STEPS : 20STEPS					
EDIT LOCK : [OFF]					
TO SAVE TO FLOPPYDISK : NOT DONE					
GROUP SET : R1 + S1					
! Select item					
SUB HD	CAP				
HEADER	JOB TXT	CMD POS	LIST 1	LIST 2	

Job Header Display

1

Enter the edit mode.

Depress **EDIT**.

COPY	DELETE	ED LOCK	JOB NAME	CMT NAM
------	--------	---------	----------	---------

The softkey label shown on the left is displayed.

2

Depress **F2** [DELETE].

			CANCEL	EXECUTE
--	--	--	--------	---------

The softkey label shown on the left is displayed.

3

Depress **F5** [EXECUTE].

J : *****	S : ***	LOCK	CYCLE	STOP	EDIT
JOB LIST (SORTING)					
TEST-1	TEST-2	WORK-B	WORK-C		

Job List Display (Sorting)

The edit job is deleted.

At completion of deletion, the job list (sorting) appears.

In the status display area, "\*\*\*\*\*" is displayed for the job name, indicating that no job is called up for editing.

Depressing **F4** [CANCEL] stops job deletion and the job list display is returned.

# JOB LIST DISPLAY

The job to be deleted is selected on the job list display.

## How to Display

- When a job is not selected, perform the following operation.  
**TEACH** → **F4** [SEL JOB] → **CURSOR** or character input operation to select a job (refer to page 61). → **ENTER** (job content display) → to 2
- When a job is selected, perform the following operation.  
**DISP** → **F1** [JOB] → **F1** [DIS CHG]  
**F4** [LIST 1] → Job list display (sorting order)  
**F5** [LIST 2] → Job list display (registering order)

J	WORK-A	S	003	LOCK	CYCLE	STOP	DISP
JOB LIST (SORTING)							
JOB-1	JOB-2	TEST140		WORK-A			
WORK-B							

Job List Display (Sorting)

J	WORK-A	S	003	LOCK	CYCLE	STOP	DISP
JOB LIST (RECORDING)							
NO.	JOB NAME	CAP (POS)	DATE	SAVE			
00001	TEST140	100(024)	10/11 08:45	●			
00002	JOB-1	238(105)	10/11 14:19	●			
00003	WORK-A	555(110)	10/15 09:03	○			
00004	WORK-B	309(084)	10/22 11:25	●			
00005	JOB-2	201(040)	10/23 15:30	○			

Job List Display (Recording)

1

Enter the edit mode.

Depress **EDIT**.

COPY	DELETE	ED LOCK	JOB NAME	CMT NAME

The softkey label shown on the left is displayed.

2

Depress **F2** [DELETE].

! Enter new JOB name				
ABC	SYMBOL			
CAP/LC	←	BACK SP	→	QUIT

The softkey label shown on the left is displayed.

# OTHER OPERATION

**3**

Input a job name to be deleted.

• Cursor Key

Select a job to be deleted by cursor key or character input operation.

• Character Input

Or

Depress **F5** [QUIT] to complete character input operation.

The job to be deleted is reversely displayed.

**4**

Depress **ENTER**.

**5**

Depress **F5** [EXECUTE].

The selected job is deleted.

At completion of deletion, the job list display (sorting) appears.

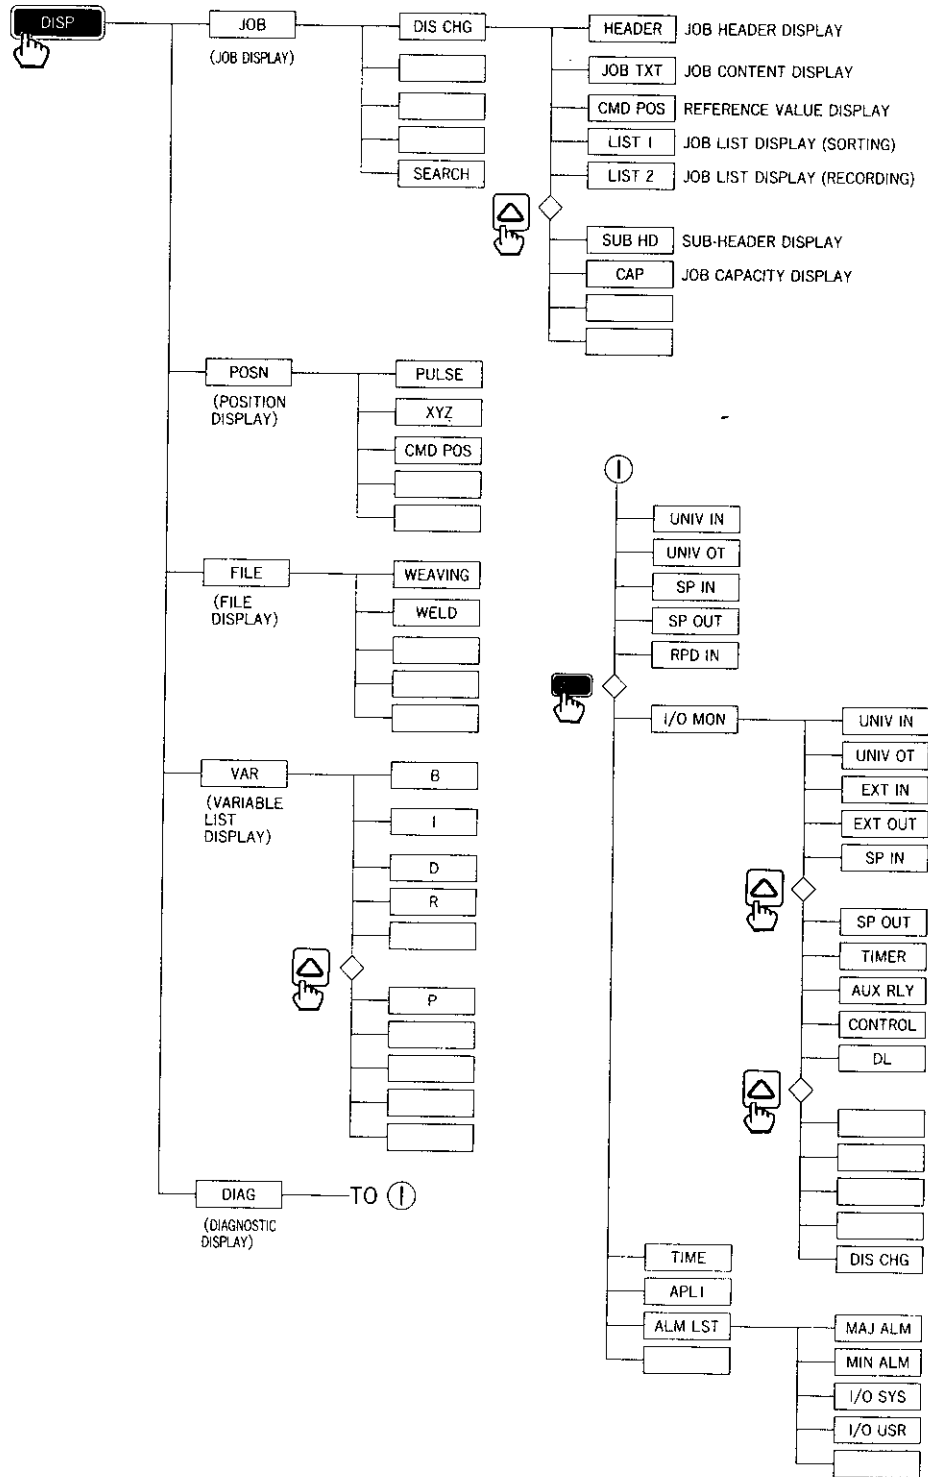

Depressing **F4** [CANCEL] stops job deletion and the job list display appears.

# SOFT KEY TREE

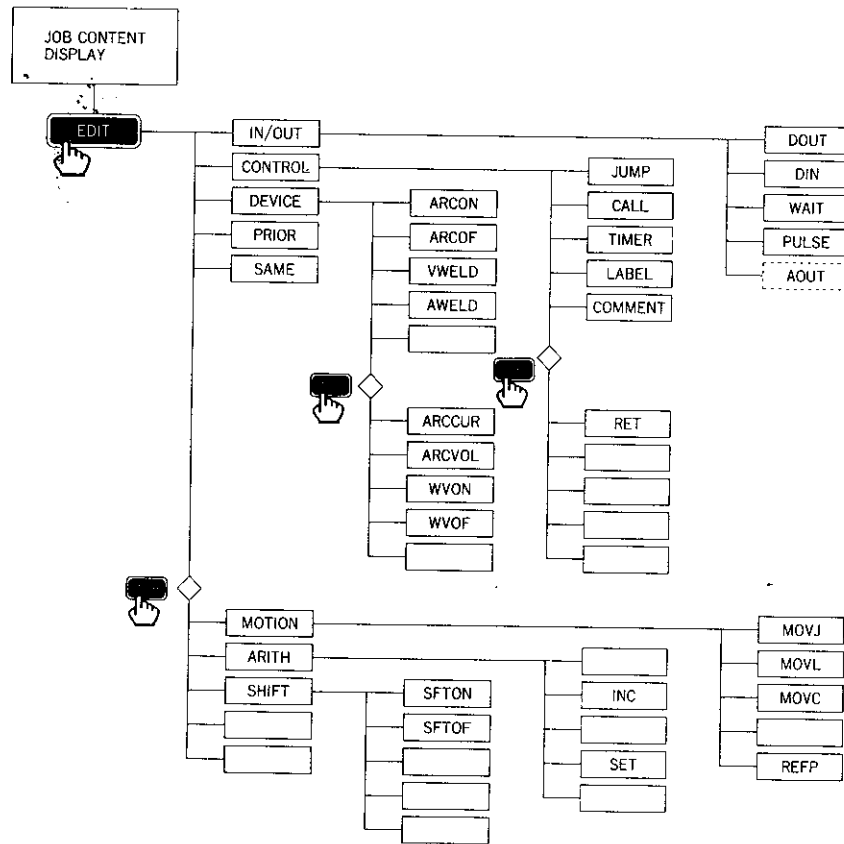

The following shows one basic operation tree for reference.

● When **DISP** is depressed

# SOFT KEY TREE

● When **EDIT** is depressed during job content display.

● When **EDIT** and **▶** is depressed during job content display.

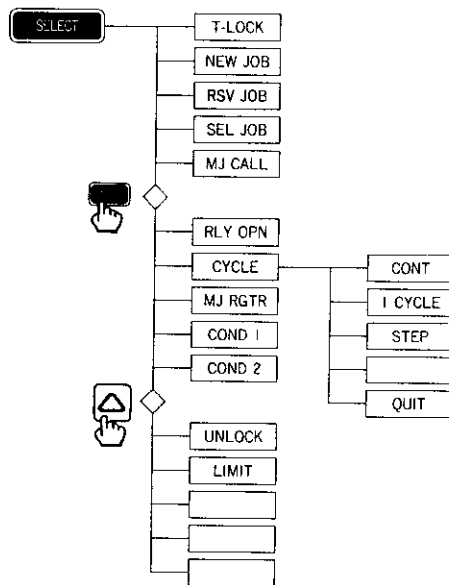

●When **EDIT** is depressed during job header display

●When **EDIT** is depressed during job list display

●When **SELECT** is depressed in teach mode

# INSTRUCTIONS FOR ARC WELDING

## NOTATION

1. [ ] : Not displayed in the screen
2. < > : Numerical or character data
3. - / --- : Selection item (Select one)

## ● Move Instructions

Instruction	Function	Format	Example
MOVJ (Move, Joint)	Moves to the teach point by joint interpolation.	[Position data][Base axis position data] [Station axis position data] VJ = <Play speed> VJ = <Position level> UNTIL Syntax NWAIT	MOVJ VJ=PL=2 UNTIL IN#(16) ON NWAIT
MOVL (Move, Linear)	Moves to the teach point by linear interpolation.	[Position data][Base axis position data] [Station axis position data] V = <Play speed> VR = <Wrist orientation play speed> VE = <Ext. axis play speed> PL = <Positioning level> NWAIT	MOVL V=138 PL=2 UNTIL IN#(16) ON NWAIT
MOVC (Move, Circular)	Moves to the teach point by circular interpolation.	[Position data][Base axis position data] [Station axis position data] V = <Play speed> VR = <Wrist orientation play speed> VE = <Ext. axis play speed> NWAIT	MOVC V=138 NWAIT
REFP (Reference, Point)	Specifies wall point of weaving	[Position data][Base axis position data] [Station axis position data] <No.> ↑ (Wall point 1 to weaving=1, wall point 2 of weaving=2)	REFP1

## ● I/O Instructions

Instruction	Function	Format	Example
DOUT (Digital, Out)	Turns ON/OFF external output signal.	OT#( <Output No.> ) OG#( <Output group No.> ) <Status> B<Variable No.>	DOUT OT#(12) ON DOUT OG#(02) 24
PULSE	Outputs pulse to external output signal.	OT#( <Output No.> ) T = <Time> ↑ (0.10 to 3.00S) Note : If no specification, 0.3S is set.	PULSE OT#(10) T=0.60
DIN (Digital, In)	Reads input signal.	B<Variable No.> IN#( <Input No.> ) IG#( <Input group No.> ), OT#( <Univ. output No.> ), OG#( <Univ. output group No.> ), SIN#( <Special input No.> ), SOT#( <Special output No.> )	DIN B16 IN#(16) DIN B02 IG#(02)
WAIT	Waits until input relay coincides with specified status.	IN#( <Input No.> ), IG#( <Input group No.> ), <Status> B<Variable No.> T = <Time>	WAIT IN#(12) ON T=10.00 WAIT IN#(12) B02

## ● Control Instructions

Instruction	Function	Format	Example
JUMP	Jumps to specified label or job.	<Label No.> JOB : <Job name> IG#(<Input group No.>) B<Variable No.> IF syntax	JUMP JOB : TEST1 IF IN#(14) OFF
* (Asterisk)	Label indicated position to be jump.	Within 8 characters (half-size)	*123
CALL	Calls up specified job.	<JOB : Job name> IG#(<Input group No.>) B<Variable No.> IF syntax	CALL JOB : TEST1 IF IN#(24) ON
RET (Return)	Returns to the called job.	IF syntax	RET IF IN#(12) OFF
END	End of job.		END
NOP	No operation.		NOP
TIMER	Stops manipulator for specified time.	T = <Time> ↑ (0.01 to 327.67S)	TIMER T = 12.5
IF Syntax	Determines a variety of conditions.	<Comparison element 1> =, <, >, >=, <, <Comparison element 2>	JUMP *12 IF IN#(12) OFF

## ● Shift Instructions

Instruction	Function	Format	Example
SFTON (Shift, On)	Starts the shift operation.	P<Variable No.> RF, TF, UF#(<User frame No.>) EX<Variable No.> { RF : Robot coordinate TF : Tool coordinate UF : User coordinate }	SFTON P12
SFTOF (Shift, Off)	Stops the shift operation.		SFTOF

## ● Operating Instructions

Instruction	Function	Format	Example
INC	Adds one to the contents of specified variable	B<Variable No.> I<Variable No.>	INC 143
CLEAR	<ul style="list-style-type: none"> <li>Data are cleared on variable data specified at Tag 1 and onward. The cleared number is the setting number in Tag 2.</li> <li>When ALL is set in Tag 2, all variables following the specified variable in Tag 1 are cleared.</li> <li>When STACK is set at Tag 1, all job call stacks are cleared.</li> </ul>	B<Variable No.> I<Variable No.> D<Variable No.> R<Variable No.> STACK<Number data> ALL	CLEAR BOO ALL CLEAR STACK

## ● Other Instructions

Instruction	Function	Format	Example
(Apostrophe)	Displays comments registered in job header display.	<Comment> (Within 32 characters, half-size)	Job to draw a square of 100mm dia.

## ● Working Instructions for Arc Welding

Instruction	Function	Format	Example
ARCON (Arc On)	Outputs arc ON instruction.	AC=<Current output> AV=<Voltage output> AVP<Ratio to appropriate voltage output> T=<Time> V=<Welding speed> ASF#(<Welding condition start file No.>) RETRY (RETRY : Sets retry function)	ARCON ARCON ASF#(1) ARCON AC=230 AVP=90 T=1.00 V=150 RETRY
ARCOF (Arc Off)	Outputs arc OFF instruction.	AC=<Current output> AV=<Voltage output> AVP<Ratio to appropriate voltage output> T=<Time> AEF#(<Welding condition end file No.>) ANTSTK (ANTSTK : Antistick, sets welding release function)	ARCOF ARCOF AEF#(2) ARCOF AC=300 AVP=92 T=1.00 ANTSTK
ARCCUR (Arc current)	Specifies the current output for welding.	AC=<Current output>	ARCCUR AC=200
ARCVOL (Arc voltage)	Specifies the voltage output for welding.	AV=<Voltage output> AVP=<Ratio to appropriate voltage output>	ARCVOL AV=20 ARCVOL AVP=100
AWELD	Outputs the current instruction value for welding.	<Current instruction value> (-14.1A to +14.0A)	AWELD 12
VWELD	Outputs the voltage instruction value for welding.	<Voltage instruction value> (-14.1V to +14.0V)	VWELD 2.5
WVON (Weave On)	Starts the weaving operation.	WEV#(<File No.>)	WVON WEV#(12)
WVOF (Weave Off)	Stops the weaving operation.	-	WVOF
